# MANAGEMENT OF WASTE FROM CONSTRUCTION AND DEMOLITION

### OBJECTIVE

#### Management of Waste from Construction and Demolition

Reduce the amount of waste from construction and demolition deposited in landfills and incinerators by recuperating, reusing and recycling.

#### ASSESSMENT PROCEDURE

##### **Option 2: Reduction of waste generated from works**

Do not generate more than 36.6 kilograms of construction waste per square meter of building constructed.

#### COMPLIANCE WITH THE REQUIREMENTS

**CUPACLAD® contributes to reducing waste from construction work via its works planning strategies. The prior work of rethinking the construction work means the sending of the materials is optimized, and therefore so is the amount of waste generated.**

**During the onsite installation, waste of approximately 2.5% of the material is produced, which means approximately 23kg of waste per square meter of building constructed, which is less than the 36.6kg of waste permitted by this credit.**

#### REFERENCE STANDARD

- European Commission Waste Framework Directive 2008/98/EC
- Waste Incineration Directive 2000/76/EC
- EN 303

#### ADDITIONAL DOCUMENTATION

- Environmental Product Declarations (EPD).

#### Notes

1. The information contained in this document corresponds to a study into the possibility of fulfilling the credits for LEED environmental certification according to the information provided by the company. This document does not constitute a certification of the product, nor does it guarantee compliance with local applicable laws.
2. Obtaining the percentage of impact reduction, or the points for the certification, depends on actions across all of the materials and products used in the construction of the building to be certified.
3. The conclusions of this study apply only to the products mentioned in this report and are subject to the technical conditions of the product remaining the same, as well as the requirements of the environmental certifications systems that are the subject of the study.
4. This document gives information on the possible contribution of the products studied towards obtaining the LEED certificates. However, the final decision as to whether or not a product complies with the LEED certification is exclusively down to the GBCI (Green Business Certification Inc).
